## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims **1-13** are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose a clipping circuit comprising a clipper for clipping a target signal, a subtractor, a minimum value setter and maximum value setter, wherein, when the data value of the target signal fed to the clipper falls within the range of data values set for the target signal by the maximum value and minimum value setters, the target signal is output intact, when the data value of the target signal fed to the clipper is smaller than the minimum value, the target signal is output after being clipped at the minimum value, and, when the data value of the target signal fed to the clipper is greater than the maximum value, the target signal is output after being clipped at the maximum value, as in claims **1 and 2**;

a range setting circuit for comparing, for each of image signals obtained from individual pixels, a data value of a target image signal obtained from a pixel targeted by the edge enhancement with each of data values of two adjacent image signals obtained from pixels adjacent to the targeted pixel to set a range of data values in which the data value of the target image signal is allowed to vary by setting as a maximum value the data value of one of the two adjacent image signals whose data value is greater than the data value of the target image signal and setting as a minimum value the data value of one of the two adjacent image signals whose data value is smaller than the data value of the target image signal, as in claims **3 and 7**;
